### WORKSHOP OVERVIEWS:

#### **Smart Searching: Search Filters and Expert Topic Searches**

This workshop will cover the areas of:

(1): Search filters: what are they, where can you find them and when and how should you use them? How are they developed?

(2) What we can learn from this methodology to apply in general searching – a look at the Smart Searching resource for some tips and tricks for building expert topic searches

#### **PubMed Train the Trainer**

PubMed (Medline) is a core database for medical librarians. Formal training options are lacking in Australia. This workshop will prepare trainers to impart the knowledge with colleagues. Workshop participants will be taught from a curriculum that defines the knowledge elements and core competencies that need to be learned in order for students to claim basic PubMed search skills. Pointers will also be given to higher level skills that may be further developed in independent study.

#### **Cost-Effectiveness Analysis for Health Librarians**

The cost-effectiveness workshop will comprise a 3 hour session that will give participants an understanding of the concept of cost-effectiveness in healthcare, and when and why it can be used. Participants will also be given an introduction to how costs and benefits are measured in healthcare, and guidance on which databases are commonly used to source economic literature to support cost-effectiveness analysis or systematic reviews that involve cost-effectiveness in healthcare. Learning objectives: Understand what cost-effectiveness analysis (CEA) is, and how health researchers or clinicians could use CEA in their research or clinical decisions; Achieve a basic understanding of how to measure costs and benefits; Achieve an understanding of suitable databases for seeking economic literature for CEA and systematic reviews involving cost-effectiveness in healthcare.

#### **Research Data Management for Health Services Librarians**

This workshop will cover a range of research data management (RDM) topics including:

- Why should “we” care about research data?
- ANDS and Research Data Australia: supporting the work of Health Services Librarians
- Special challenges of health & sensitive data: licensing, ethics, confidentiality, access and more
- Getting health data ready for publishing
- Maximising value in your use of controlled vocabularies for health & medicine
- An introduction to the new ANDS Vocab Service and an overview for health services

The session will include presentations, hands on activities and opportunities for participative contributions to discussions around these topics, and any others that come up throughout the session.
